

3 POINT LINKAGE e-Spreader

(Smart Generation)

Strong. Simple. Smart.

+64 7 847 8492

Hydraulically
driven

Simple to use
and maintain

Smart design
Smart technology

Mega reliable
Built to last

Fast parts, servicing
and support

You'll love this next Generation of SAM e-Spreader.
From owner operators to contractors -
it will save you time and money!

It's foolproof AND future proof. This SAM is simple for everyone on the farm to use - it's incredibly accurate incorporating smart and intuitive Kiwi tech. The e-Spreader is controlled from a SAM screen in your tractor cab and the floor is driven hydraulically allowing you to easily and accurately set your spread rate.

The SAM e-Spreader is easy to calibrate and every e-Spreader has integrated load cells. This is the only way to get true

accuracy by weighing your product loss as you go. This technology means the correct application rate is applied regardless of changes in forward speed.

The gateway unlocks GPS speed from the tractor network, Basic sectional control, Headland control and Full variable rate control.

It also integrates easily with third party GPS systems such as GreenStar, Topcon and Trimble. So if you are already using a third party tracking system you don't have to reinvent the wheel.

YEARS

PROUDLY NZ MADE
SINCE 1946

NZ's favourite.

Known for practical design and easy to use operation, SAM Spreaders are designed and built from over 80 years of experience. The features in today's iconic machines are the benchmark for fertiliser spreading throughout New Zealand.

Two tiers: Simple / Smart (e-Spreader with screen & load cells)

Smart rate controller

in-cab control is at your fingertips. Reliable German hardware coupled with innovative Kiwi software makes setting your delivery parameters a breeze – just key in your spread rate, product density and spread width. We know future proofing is important so software updates are easy.

Check your speed & distance covered at a glance

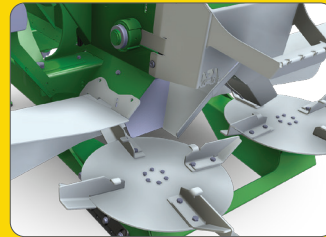

Your hectare gauge counts down as you go, showing you how many hectares you have left of spreading at your current rate.

Fast two-click calibration

Integrated load cells are standard. They give you improved accuracy as you are weighing the product in your bin. The screen comes preset with common products and their densities. Save your own calibrated fertiliser products as you go for a quick start next time.

E-for-Easy.
E-for-Electric.

Border control & bulk unloading

Extra functions are included as standard, control on both sides. Border control reduces spinner speed on the relevant disc which decreases spread width. This is helpful for spreading beside fencelines and waterways. Bulk unloading unloads excess fertiliser in a pile.

Electric back door

Simply control the height from your screen. Also handy for reducing waste - don't lose any product out the back when driving down the race.

Protection and durability

All SAM Spreaders have seen an evolution of painting procedure which greatly improves corrosion protection. Firstly a blast then a thermal-arc spray, followed by the SAM coating difference. Its mega tough stuff!

Well considered design ensures all hydraulic fittings are moved away from fertiliser contact areas, while the hydraulic block has been enclosed in a cabinet for maximum protection. Hydraulic lines are housed inside and are well hidden with stainless steel isolators for added corrosion protection. New front docking mounts for tidy, hassle-free storage and storage feet.

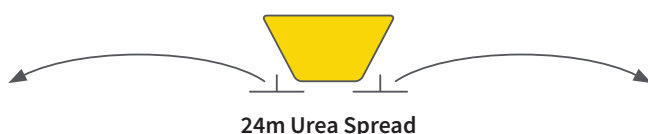

Spinner motors

Stainless discs, under-mounted hydraulic spinner motors and incorporated lifetime bearings.

SPECIFICATIONS

Length	1600mm
Width	2150mm
Height	1940mm
Capacity	2300L (expandable)

Superphosphate	2000kg
Lime	3300kg
Urea	1750kg

G'DAY

FAST PARTS, SERVICING AND SUPPORT

Our SAM range is backed by a quick and efficient support service from central Hamilton. The team are also available for technical help.

All SAMs go through rigorous quality testing and have a comprehensive warranty. We deliver quality products and stand by them.
